

CYBERX NETWORKS

REDEFINING CYBER SECURITY

OVERVIEW

CyberX Networks is a pioneering cybersecurity firm (a division of CDE Open Source Solutions LTD) dedicated to safeguarding digital assets through advanced defense systems. We combine Artificial Intelligence (A.I.) and Machine Learning (M.L.) to stay one step ahead of evolving global threats.

CYBERX NETWORKS

ABOUT US

Innovative Defense for the Modern Era CyberX Networks is a leading cybersecurity provider dedicated to protecting organizations through intelligence-driven defense systems. **We specialize in bridging the gap between complex security needs and user-friendly operations.** By integrating advanced A.I. and Machine Learning, we provide autonomous solutions that proactively identify and neutralize threats before they impact your business.

PRODUCTS

MAESTRO SOC-IN-A-BOX

Maestro is an invisible, Layer 2 autonomous engine that provides high-speed active defense without requiring network changes. Using A.I. and Machine Learning, it identifies and blocks sophisticated threats, DDoS attacks, and zero-day vulnerabilities in real time. It serves as a "plug-and-play" Security Operations Center, offering deep visibility and automated mitigation to protect your infrastructure silently and effectively.

PRODUCTS

SCOREB VULNERABILITY ASSESSMENT

ScoreB is a cutting-edge A.I.-powered penetration testing and assessment platform that provides a 360-degree view of your organization’s security posture. Unlike static annual audits, ScoreB delivers continuous, real-time scanning of both internal and external assets to identify vulnerabilities, misconfigurations, and potential entry points. By utilizing the AISE Scanning Engine, it prioritizes risks based on their actual exploitability, offering actionable insights and clear reporting to help you remediate threats before they can be leveraged by attackers.

PRODUCTS

VENDOR ASSESSMENT - THIRD PARTY RISK MANAGEMENT

Our TPRM service, powered by the ScoreB AI engine, eliminates the "blind spots" in your supply chain. We automate the entire vendor lifecycle—from initial due diligence and AI-powered questionnaire analysis to continuous real-time monitoring. By assigning dynamic risk scores to every partner and supplier, we ensure your external connections meet your security standards, protecting you from fourth-party vulnerabilities and supply-chain breaches before they impact your perimeter.

PRODUCTS

ASAT PLATFORM - PHISHING SIMULATION & CYBER SECURITY TRAINING

ASATP is an automated platform designed to strengthen the "human firewall" through continuous education and realistic threat simulation. It delivers highly targeted phishing simulations and interactive training modules that mirror real-world social engineering tactics. By analyzing user behavior and identifying high-risk individuals, ASATP provides measurable insights into your organization's human-related vulnerabilities, transforming employees from potential security risks into an active line of defense.

PRODUCTS

DYNAMO - DYNAMIC FIREWALL

Dynamo is an open, API-driven security platform designed to provide real-time, dynamic control over network traffic. Operating at Layer 2, it integrates transparently into your existing infrastructure to isolate compromised hosts and contain lateral movement instantly. Unlike traditional firewalls with static rules, Dynamo is "empty-by-default," allowing SOC teams and automated A.I. tools to push security policies on the fly via its secure API. This creates a highly responsive defense layer that can automatically quarantine threats and protect sensitive network segments without requiring IP changes or complex re-routing.

Dynamo
[An OSI L2 Dynamic Firewall]

PRODUCTS

X-CHANGE SECURE MAIL SERVER

X-Change is a highly secure, private alternative to public cloud email and collaboration suites. Designed for organizations that demand total data sovereignty, it provides a fully managed environment for email, calendar, and contacts with integrated end-to-end security. By combining enterprise-grade performance with advanced anti-spam and anti-malware filtering, X-Change ensures your sensitive communications remain encrypted and hosted within a controlled, compliant infrastructure, shielding your business from data harvesting and external eavesdropping.

PRODUCTS

ESG FIREWALL AI/IPS/SWS/VPN/OPSEC

The ESG (Edge Security Gateway) Firewall is a robust, enterprise-grade perimeter defense solution designed to protect the network edge from modern cyber threats. It combines traditional firewalling with next-generation features, including Deep Packet Inspection (DPI), Intrusion Prevention (IPS), and advanced VPN capabilities. Engineered for high-throughput and reliability, the ESG Firewall acts as the primary gatekeeper, ensuring that only authorized traffic enters your infrastructure while providing granular visibility into application usage and user behavior across the entire organization.

PRODUCTS

SECURE FILESERVER - WITH ANTI-RANSOMWARE TECHNOLOGY BUILT-IN

SecFS is an enterprise-grade, high-performance file storage solution built on a secure Open Source foundation. It provides a centralized, encrypted environment for storing and sharing sensitive business data without the recurring costs of proprietary licensing. With a focus on data sovereignty and integrity, SecFS offers seamless integration with existing Windows and Linux environments, ensuring that your files are always accessible, protected by advanced permission controls, and backed up through automated, encrypted offsite synchronization.

REMMON - MONITORING & ASSET INVENTORY

RemMon is an advanced, multi-platform monitoring solution designed to provide total visibility across your entire digital landscape. Through a single, intuitive dashboard, RemMon tracks the health and performance of Linux and Windows servers, web services, and any device with an IP address, whether located within your internal network or in the cloud. With real-time notifications and powerful reporting, RemMon ensures you stay ahead of potential issues—tracking system resources, connectivity, and update statuses to maintain peak operational reliability.

TICKETING SYSTEM - KNOWLEDGE BASE & AI

Our streamlined ticketing system features automatic user onboarding and intelligent categorization for Incidents, Service Requests, Problem, and Change Management. Built for multiple agents, the platform delivers supreme reports to track performance and optimize service delivery. It further enhances the user experience with a built-in knowledge base and integrated AI for seamless automated interaction.

DOCCHAT AI - TALK TO YOUR DOCUMENTS

DocChat AI is an enterprise-grade file storage solution that combines high-performance open-source architecture with cutting-edge Generative AI. Beyond standard encrypted storage and data sovereignty, DocChat AI features an integrated AI Assistant that allows you to "talk to your documents." By securely indexing your private data locally, the system enables users to query complex files, summarize lengthy reports, and extract specific insights instantly through a natural language interface—all while ensuring your sensitive information never leaves your secure environment.

PRODUCTS

AI AGENTS - [CHATBOTS - EMAIL - TELEPHONY]

- AI Voice Agent: 24/7 automated telephony that qualifies leads and books meetings in real-time.
- AI Email Agent: Intelligent assistant for context-aware replies and automated calendar management.
- AI Chatbot: Multilingual website assistant trained on your data to resolve 80% of support queries.

PRODUCTS

AI SECURITY ANALYST - FULLY AUTONOMOUS

Our AI Security Analyst serves as an agentic Tier-1 and Tier-2 responder that lives within CyberX's ecosystem. Unlike traditional static alerts, this assistant functions as a "digital detective," autonomously ingesting raw telemetry from various systems—firewalls, mail servers, and endpoints—to perform deep-dive investigations in seconds. It correlates disparate events, filters out noise, and provides human analysts with enriched incident summaries, complete with adversary tactics, recommended remediation steps and **ACTIVE DEFENSE**. By handling the heavy lifting of triage and evidence gathering, it reduces response times by up to 95% and ensures that your security posture is proactively managed 24/7 without the risk of fatigue.

PRODUCTS

UNITY - UNIFIED SECURITY COMMAND CENTER

Unity is our intuitive, all-in-one management platform that serves as a single pane of glass for your entire digital ecosystem. By leveraging advanced API integrations, Unity aggregates real-time data from every layer of your defense and operations. Whether it's the autonomous threat neutralization status from Maestro, real-time risk scores from ScoreB, or employee training progress from ASATP, Unity provides a centralized, high-level overview. This allows decision-makers to monitor security health, infrastructure performance, and AI agent activity through a simplified, actionable interface—eliminating the need to switch between multiple consoles.

SERVICES

GRC & ADVISORY

Our Governance, Risk, and Compliance (GRC) services provide executive-level leadership through v-CISO and DPO-as-a-Service models. We help organizations navigate complex regulatory landscapes—including GDPR, ISO 27001, and NIST—by aligning security strategy with business goals. From developing policy frameworks to managing privacy impact assessments, we deliver the strategic oversight needed to ensure total compliance and risk mitigation without the cost of a full-time executive hire.

LINUX & VIRTUALIZATION

As The Linux Experts, we provide elite engineering and support for mission-critical open-source environments. From server hardening, KVM Virtualization, Docker containers and high-availability clustering to seamless multi-vendor integrations, our certified team ensures your infrastructure is secure, stable, and cost-optimized. We specialize in transforming open-source flexibility into enterprise-grade performance, offering 24/7 proactive maintenance and expert consulting to eliminate vendor lock-in.

INFRASTRUCTURE

We deliver high-performance foundation services including Cloud, Virtualization, and Network Management. By leveraging private and hybrid cloud architectures, we eliminate the need for costly on-premise hardware while ensuring 24/7 availability. Our team manages everything from virtual server deployment to software-defined networking, providing a scalable, secure, and cost-optimized environment that grows with your business.

CYBERX NETWORKS

WHY CHOOSE US?

We provide a unique, triple-threat advantage by merging CyberX's autonomous A.I. defense, CDEOSS's open-source infrastructure expertise, and HelionMind's operational A.I. automation. Unlike traditional providers who offer fragmented tools, we deliver a unified ecosystem that secures your network, manages your data, and automates your business processes simultaneously. By eliminating vendor lock-in, reducing licensing overheads, and deploying proactive, self-healing security layers, we transform your IT from a cost center into a resilient, high-performance engine for growth.
